"The Effect of Soft Kills: Disrupt combat activities without necessarily killing the combatants. The U.S. military has begun to take seriously the weaponization of such technologies in the last several years, but the program remains relatively small and somewhat peripheral "
- Gellhorn, E.: Autonomic Imbalance and the Hypothalamus, Minneapolis, 1957, University of Minnesota Press.
["States of autonomic imbalance were produced by directly altering the excitability of either the anterior or posterior division of the hypothalamus through physiological or pharmacological means. The responsiveness of the autonomic system to various stimuli was greatly altered, and the laws operating in reflex tuning were found to be valid in states of hypothalamic imbalance." pp. 4]

"Autonomic nervous system: The initial reaction is like that of known sympathomimetic drugs. There is a rise in blood pressure and pulse rate, occasionally followed by a rapid drop in both blood pressure and pulse."

- Passie, T., Halpern, J. H., Stichtenoth, D. O., Emrich, H. M., & Hintzen, A. (2008). The Pharmacology of Lysergic Acid Diethylamide: A Review. *CNS Neuroscience & Therapeutics*, 14(4), 295–314. doi:10.1111/j.1755-5949.2008.00059.x
"Somatic Effects: The threshold dose for measurable sympathomimetic effects in humans is 0.5–1.0 µg/kg LSD p.o. A moderate dose of LSD for humans is estimated as 75–150 µg LSD p.o. Dosing of animals (rats and cats) with very high doses of LSD (up to 100 µg/kg i.v.) leads to mild autonomic changes of mydriasis, tachycardia, tachypnea, hyperthermia, hypertonia, and hyperglycemia. Autonomic changes reflect a stimulation of both branches of the autonomic nervous system."
